Audio Drivers are essential for your motherboard to produce sound. And if you're looking for the most up-to-date audio drivers, the best place to go is Intel's website. There, you will find audio drivers for all your AA chipset motherboards, audio drivers for all Intel desktop boards released since 2005, and audio driver packages specifically designed to simplify system updates on older Intel desktop boards. Some of these contain driver packs with video driver patches as well as WLAN and Video Camera support patches that are pre-requisite components needed by your motherboard in order to function properly. Another very interesting thing that Intel has done is to provide updated driver support for motherboards with older chipsets before they were officially released. By doing so, you will be able to update your AA chipset motherboard with updated audio drivers in the future when they are officially released. You can find updated audio drivers here. Another very interesting thing that Intel has done is to provide updated driver support for motherboards with older chipsets before they were officially released. By doing so, you will be able to update your AA chipset motherboard with updated audio drivers in the future when they are officially released. You can find updated audio drivers here. On Intel's Motherboard Compatibility List, it shows the most updated Audio Drivers for each of their motherboards. Keep in mind that drivers can be updated at any time after the motherboard was released. Sandy Bridge 10 generation audio drivers are outdated for most AA chipset motherboards that were released before 2011. On the other hand, 2011 generation audio drivers are current for most Sandy Bridge 10 generation AA chipset motherboards. We strongly recommend using this website instead to download updated audio driver package with video driver patches pre-installed. This is an updated package containing video & WLAN patches specifically designed to simplify system updates on older Intel desktop boards (Intel D945GCLF2 / D945GCLF2V). These are the only audio drivers for this chipset. This is an updated package containing audio driver patches for ASRock / ASUS Intel D945GCLF2 V2 & V3 Motherboards. If you have an AA chipset motherboard with this Chipset that is not covered in the list above, then you will need to download this package to be able to upgrade your audio driver.

Intel's Motherboard Compatibility List is a very helpful website when trying to find Audio Drivers for your motherboards. This website lists most Intel AA Chipset motherboards with most up-to-date audio drivers. If you're looking for the audio driver for your Intel Desktop Board, then all you need to do is click on "Audio" under your motherboard. Then you will be able to see an audio driver list like this.

If your motherboard is not in the list or if you are not sure whether it's in the list or not, go to the bottom of this page and choose "All Intel Desktop Boards". Then scroll down until you find it.

On this website, it shows motherboard features like DMI interface, PCI-E 2.0 & USB 3.
